PROFESSIONAL SUMMARY

Computer Science (AI) graduate and Java developer with hands-on experience building backend microservices for a production CPaaS (Communications Platform as a Service) using Spring Boot, Spring Security, JWT, and Apache Kafka. Combines strong full-stack fundamentals (Java, JavaScript, React, Angular) with practical experience across content strategy and web development. Proven ability to design secure, scalable systems and deliver responsive, user-friendly applications. Eager to bring strong engineering craftsmanship, reliable problem solving, and communication skills to a dynamic, growth-oriented team.

WORK EXPERIENCE

- Jan 2026 – Present

Junior Java Developer, Keyanna Technologies, Ahmedabad

 - Built and maintained backend microservices for the company's CPaaS (Communications Platform as a Service) product using Spring Boot and a microservices architecture.
 - Implemented secure authentication and authorization flows with Spring Security and JWT-based token management.
 - Integrated Apache Kafka for real-time, event-driven messaging between services, improving reliability of communication workflows.
 - Worked across relational databases to support core CPaaS features, collaborating with the engineering team on API design, schema optimization, and production deployment.
- Apr 2025 – Dec 2025

Content Writer, Parul University, Vadodara

 - Created, edited, and oversaw academic and technical content for the Centre for Distance and Online Education (CDOE) department, ensuring accuracy and policy compliance.
 - Synthesized complex pedagogical modules and university program documentation into structured, accessible digital learning materials.
 - Collaborated with academic faculty and department leads to maintain editorial rigor across curricula.
- Feb 2025 – May 2025

Web Developer Intern, Talent Lad, Vijayawada

 - Designed and developed responsive, mobile-friendly web pages using HTML, CSS, and JavaScript.
 - Assisted in building and maintaining interactive client websites, collaborating closely with senior developers to fulfill feature requirements.
 - Conducted cross-browser responsiveness audits and optimized layout rendering speeds across mobile and desktop devices.

EDUCATION

- 2022 – 2026

Bachelor of Technology – Computer Science (Artificial Intelligence)

Parul University, Vadodara — CGPA: 8.26 / 10
- 2020 – 2022

Class XII (Intermediate MPC)

Sri Vidwan Junior College, Warangal, Telangana — Score: 96.4%
- 2019 – 2020

Class X (Secondary School Certificate)

Vidyodaya High School, Nekkonda, Warangal, Telangana — GPA: 10.0 / 10

TECHNICAL & ACADEMIC PROJECTS

Jan 2026	Banking Management System (APEX TRUST), Enterprise Full-Stack [Live Demo] [GitHub] Tech Stack: Spring Boot 3 (Java 21), Angular 19, TiDB Serverless / MySQL, JWT, Liquibase, Docker, Render - Architected an enterprise-grade core banking platform using Spring Boot 3 (Java 21), Angular 19, and TiDB Serverless with automated Liquibase schema versioning and Docker containerization. - Engineered 4-tier Role-Based Access Control (Admin, Branch Manager, Teller, Customer) secured by stateless JWT authentication, BCrypt encryption, and comprehensive audit logging. - Built a real-time transaction & ledger engine handling branch-level customer onboarding, account creation approval workflows, inter-account fund transfers, and ACID ledger consistency. - Designed modern glassmorphic UI dashboards featuring financial telemetry volume metrics and interactive holographic account verification vault widgets.
Sep 2025	Online Voting System, Web Application [GitHub] Tech Stack: HTML5, CSS3, JavaScript, Java Backend Integration, MySQL - Designed and developed a secure, efficient digital voting platform featuring user authentication, encrypted ballot casting, and real-time automated result tabulation. - Engineered frontend user interfaces and backend validation logic to eliminate duplicate votes, enforce role permissions, and ensure system reliability. - Designed relational database schemas in MySQL with strict constraints to preserve ballot anonymity and maintain verifiable election audit logs.
Nov 2025	AI Job Application Bot, Autonomous AI Agent [GitHub] Tech Stack: Spring Boot, React, Headless Playwright, Ollama (Local LLMs), MySQL - Engineered an autonomous application agent parsing candidate profiles and executing headless browser submissions via Playwright with 99.4% form accuracy. - Integrated local Ollama LLMs to generate context-aware answers to bespoke employer screening prompts with zero cloud API token overhead. - Engineered Spring Boot job queues, application state persistence, and a real-time React telemetry dashboard.

TECHNICAL SKILLS

Backend	Java, Spring Boot, Spring Security, JWT, Microservices, Apache Kafka, REST APIs
Web Technologies	HTML, CSS, React, Angular, Node.js, Express, Tailwind CSS
Databases	MySQL, MongoDB, TiDB Serverless
Tools & Platforms	GitHub, Git, REST APIs, Postman, Docker, Render
Programming Languages	Java, JavaScript, Python, DSA (Data Structures & Algorithms)
Soft Skills	Communication, Team Management, Problem Solving, Technical Documentation

ACHIEVEMENTS & STRENGTHS

- Hands-on CPaaS Backend Experience:** Proven track record building backend microservices for a real-world CPaaS product using modern Java, Spring Boot, Apache Kafka, and JWT security.
- Consistent Academic Excellence:** Demonstrated top academic performance throughout schooling and university (8.26 CGPA in B.Tech, 96.4% in Class XII, 10/10 GPA in Class X).
- Full-Stack Versatility:** Practical cross-stack experience spanning Java/Spring backend microservices, Angular/React frontend engineering, relational databases, and technical writing.
- High-Impact Communication:** Effective communicator with proven ability to synthesize complex engineering concepts into clear documentation, team presentations, and stakeholder reviews.
- Continuous Growth Mindset:** Fast learner passionate about enterprise software architecture, writing clean and maintainable code, and solving complex technical challenges.
